

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the above-identified application:

1-9 (canceled).

10. (currently amended) An apparatus for displaying a plurality of data categories, comprising:

a display that is configured to display a cursor, and to produce (i) a first visual representation of data of a first data category of the plurality of data categories, (ii) a second visual representation of data of a second data category of said plurality of data categories, ~~and~~ (iii) a third visual representation of data of a third data category of the plurality of data categories, and (iv) a fourth visual representation of data of a fourth data category of the plurality of data categories; and

a processor that is configured to receive the data of each of the plurality of data categories and control said display to present said first visual representation of the data of said first data category superimposed over said second visual representation of the data of said second data category, ~~and~~ said third visual representation of the data of said third data category, and said fourth visual representation of the data of said fourth data category, whereby the first visual representation masks (i) said second visual representation in a first common region of said first visual representation and said second visual representation, ~~and~~ (ii) said third visual representation in a second common region of said first visual representation and said third visual representation, and said fourth visual representation in a third common region of said first visual representation and said fourth visual representation, said processor further configured to determine an occurrence of a predefined event and, upon determining the predefined event has occurred, to (i) superimpose said second visual representation of the data of said second data category over said first visual representation of the data of said first data category whereby the second visual representation masks said first visual representation in said first common region, ~~and~~ (ii) superimpose said third visual representation of the data of said third data

category over said first visual representation of the data of said first data category such that the third visual representation masks said first visual representation in said second common region, and (iii) said fourth visual representation of the data of said fourth data category over said first visual representation of the data of said first data category such that the fourth visual representation masks said first visual representation in said fourth common region.

wherein the predefined event includes movement of the cursor by a user, a predefined change in the data of one or more of the plurality of displayed data categories, or both the movement of the cursor by a user and a predefined change in the data of one or more of the plurality of displayed data categories.

11. (canceled).

12. (canceled).

13. (previously presented) The apparatus of Claim 10, wherein the data of said plurality of data categories are vehicle data categories.

14. (previously presented) The apparatus of Claim 10, wherein the data of said plurality of data categories are aircraft data categories.

15. (original) The apparatus of Claim 10, wherein said display is a Multi-Function Display (MFD).

16. (previously presented) The apparatus of Claim 10, wherein the data of said first data category is sensor data.

17. (previously presented) The apparatus of Claim 10, wherein the data of said second data category is navigation data.

18. (previously presented) An apparatus for displaying a plurality of data categories, comprising:

a display that is configured to produce a first visual representation of data of a first data category of the plurality of data categories, a second visual representation of data of a second data category of the plurality of data categories; and

a processor that is configured to control said display during production of said first visual representation of the data of said first data category and said second visual representation of the data of said second data category whereby a first color is provided for said first visual representation of the data of said first data category and a second color is provided for said second visual representation of the data of said second data category,

wherein:

said first color corresponds to a first priority,

said second color corresponds to a second priority,

a first color difference (ΔE) between said first color and a background color of said display is greater than about seventy-five,

a second color difference (ΔE) between said second color and said background color is less than about seventy-five, and

the first and second color difference are each defined by the following equation:

$$\Delta E(Y, u', v') = [(155 \Delta Y / Y_{\max})^2 + (367 \Delta u')^2 + (167 \Delta v')^2]^{1/2},$$

where:

ΔY is a difference in luminance between the first color and the background color, and between the second color and the background color,

$\Delta u'$ and $\Delta v'$ are differences in chromaticity (u', v') between the first color and the background color, and between the second color and the background color, and

Y_{\max} is maximum luminance of the display.

19. (original) The apparatus of Claim 18, wherein said first color difference is greater than about ninety (90).

20. (original) The apparatus of Claim 18, wherein said first color difference is greater than about one hundred (100).

21. (original) The apparatus of Claim 18, wherein said second color difference is less than about ninety (90).

22. (original) The apparatus of Claim 18, wherein said second color difference is less than about one hundred (100).

23. (previously presented) The apparatus of Claim 18, wherein the data of said plurality of data categories are vehicle data categories.

24. (previously presented) The apparatus of Claim 18, wherein the data of said plurality of data categories are aircraft data categories.

25. (original) The apparatus of Claim 18, wherein said display is a Multi-Function Display (MFD).

26. (previously presented) The apparatus of Claim 18, wherein the data of said first data category is sensor data.

27. (previously presented) The apparatus of Claim 18, wherein the data of said second data category is navigation data.
